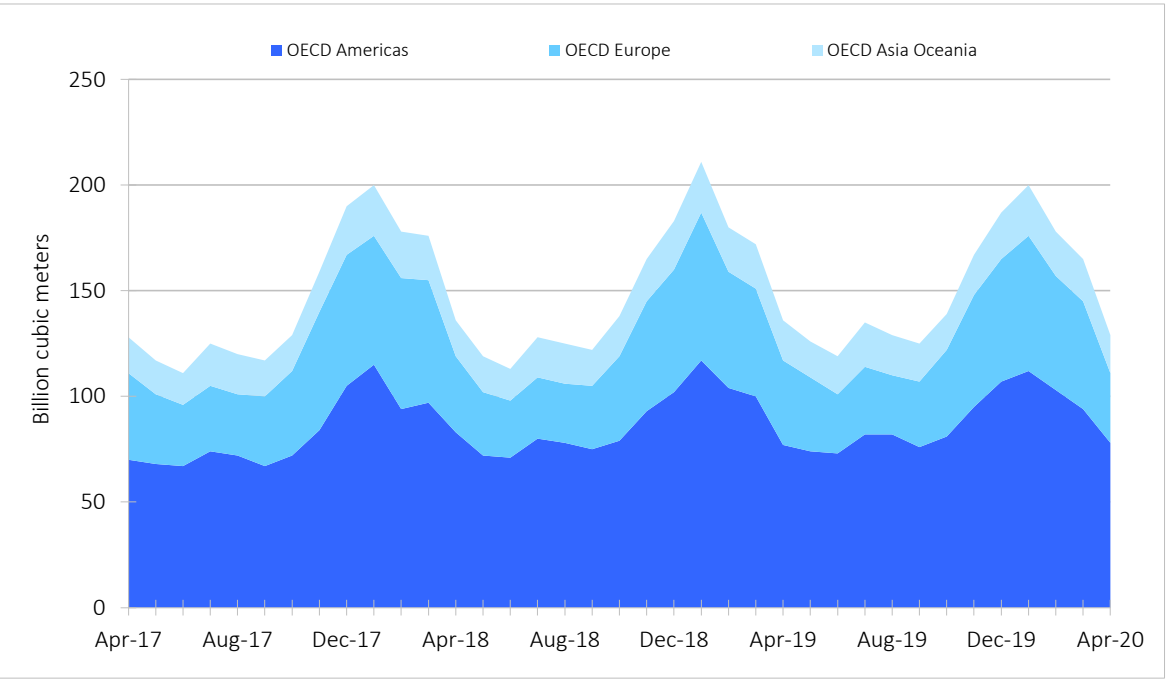
# CHART 1

## Gross consumption of natural gas by OECD region



Total OECD indigenous production of natural gas decreased by 0.2% in April 2020 compared to April 2019, due to a large decline observed in OECD Europe (-7.7% y-o-y[1]). This decline was mainly driven by considerable decreases in Norway (-8.8% y-o-y), the Netherlands (-10.3% y-o-y) and Denmark (-64.3% y-o-y). Meanwhile, in the OECD Americas, production of natural gas increased by 1.2% on a year-on-year basis, driven by continued growth in the United States (+2.2% y-o-y). In OECD Asia Oceania, production rose slightly by 0.3% in April 2020 compared to the same month last year. On a year-to-date basis, total OECD production of natural gas increased by 2.0%, with production in the OECD Americas on the rise (+3.9% y-t-d[2]) while a decline was seen in OECD Europe (-9.0% y-t-d).

Total OECD imports (entries)[3] of natural gas fell by 10.9% in April 2020 compared to the same month last year, led by a significant decrease in OECD Europe (-12.5% y-o-y), as imports from Norway (-19.8% y-o-y) and Ukraine (-42.0% y-o-y) continued to decline. Similarly, imports to the OECD Americas and OECD Asia Oceania also experienced declines, by 5.8% y-o-y and 6.2% y-o-y, respectively. In total OECD, LNG imports declined by 9.2% y-o-y, led by reduced imports from Norway (-65.4% y-o-y) and Qatar (-20.0% y-o-y). On a year-to-date basis, total OECD gas imports fell by 6.2%.

Total OECD exports (exits)3 of natural gas relatively remained stable (-0.1% y-o-y) in April 2020 compared to April 2019. Growth in the OECD Americas (+10.9% y-o-y) and in OECD Asia Oceania (+7.9% y-o-y), was offset by a decline in OECD Europe (-5.9% y-o-y). Declines in gas exports from Austria (-17.7% y-o-y), the United States (-10.5% y-o-y) and Mexico (-8.0% y-o-y) were balanced by increases from other OECD countries. In terms of pipeline and LNG split, exports by pipeline declined by 2.1% y-o-y, while LNG exports continued to increase (+6.7% y-o-y). On a year-to-date basis, total OECD gas exports rose by 2.7%.

Total OECD gross consumption of natural gas decreased by 5.3% in April 2020 compared to April 2019 due to lower demand of natural gas for industrial activities caused by the Covid-19 crisis. A large decrease was observed in OECD Europe (-17.3% y-o-y), driven by falls in France (-34.7% y-o-y), Italy (-22.9% y-o-y) and Germany (-16.5% y-o-y). The same trend was observed in OECD Asia Oceania, where decreases were seen in Australia (-10.7% y-o-y) and Korea (-12.7% y-o-y). The OECD Americas, on the other hand, experienced an increase of 1.2% y-o-y in its gross consumption due to increased consumption in the United States (+2.1% y-o-y).

1. Year-on-year (y-o-y) change over corresponding month of previous year.

2. Year-to-date (y-t-d) change over corresponding period (beginning of year to current month) of previous year.

3. Transit volumes are included. Trade amounts include intra-regional trade.

# NOTES

**Please note that all IEA data are subject to the following Terms and Conditions found on the IEA's website: http://www.iea.org/t&c/termsandconditions/**

## 1) ESTIMATED DATA

Due to the absence of official data, the following data have been estimated:

| | |
|---|---|
| Israel | January 2010 to April 2020 |
| Mexico | October 2019 to April 2020 |

## 2) COUNTRY NOTES

| | |
|---|---|
| A General Note | Starting with January 2011 data, the Imports and Exports no longer represent ultimate origins and destinations but are replaced by Entries and Exits corresponding the amounts that physically crossed the national boundaries of the country. |
| Australia | The breakdown of export destinations is estimated by the IEA on the basis of OECD imports of natural gas from Australia. |
| Austria | Most recent data are the best estimates from the Austrian national administration, based on available preliminary data. Data are usually finalised within three months following the first publication. |
| Belgium | Most recent data on origins of imports and final destinations of exports of LNG are the best estimates from the Belgian Administration based on available preliminary data. |
| Canada | Data for Canada are submitted by the Department of Natural Resources (Natural Resources Canada, or NRCan), based on actual and preliminary data from Canada's national statistical agency (Statistics Canada) and various other sources. In cases where data from these sources are unavailable, estimates are conducted by NRCan, based on information available at the time, including alternative sources. Data are usually finalised within three months of the first publication. An important source for any differences between data published by Statistics Canada and data published by the IEA is data estimated by NRCan or the IEA Secretariat. |
| Finland | Finland is reporting stock levels as of January 2019. Therefore, there is a break in stock levels between December 2018 and January 2019. |
| Iceland | There is no natural gas data for Iceland, as there is neither production nor consumption. |
| Israel | The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.<br>Information is based on data published by the Ministry of Energy and Water Resources as well as the Central |
| Mexico | Observed gross inland deliveries of natural gas from January 2013 onwards are estimated. |
| Netherlands | Starting with January 2019, more complete trade data is reported based on better information from the GATE terminal. Revisions for historical series are pending. |
| United Kingdom | Exits to the Isle of Man are reported under Non-specified/Other.<br><br>There is a break in stocks between March and April 2019 due to inclusion of stock held at LNG terminals. |
